Six commitments made by CMA in WMO EC-78

《World Cities Report 2022》

Population In cities

1. Emerging technologies such as AI and cloud platforms;
2. **Urban Multi-hazard Early Warning;**
3. Applications of meteorological satellites;
4. Education and training;
5. Joint scientific research;
6. Belt and Road Fund

After **409** days of effort...

Last year, during EC-78 session, CMA made six commitments about early warning — one of them was Urban Multi-hazard Early Warning. And today, after 409 days of effort, we'd like to hand in the following homework, which is...

AI Agent for Urban Multi-hazard Early Warning (MAZU-Urban).

It was developed under CMA's international cooperation brand “MAZU”, with a focus on urban areas.

边互动 边使用 边完善

Interacting, Using, and Improving

43 WMO Members'
requirements have been listened

35 WMO Members
tested and evaluated our work since 2025

During development, we followed the concept of “interacting, using, and improving”, and received support from many WMO members. 43 members gave suggestions to us and 35 members tested and evaluated our work.

边互动 边使用 边完善

Interacting, Using, and Improving

72% Mentioned

Short-staffed, Inadequate monitoring and forecasting capabilities, and Lack of training

➔ **Technical Gaps**

81% Mentioned

Limited ways to broadcast warning information

➔ **The “Last Mile” problem**

Based on their feedback, we found 2 main challenges:

The first is the technical gap. 72% mentioned short-staffed, inadequate monitoring and forecasting capabilities and lack of training.

The second is the “last mile” problem. 81% mentioned limited ways to broadcast warning information.

1 技术鸿沟 For Technical Gaps

围绕早期预警四大支柱 用人工智能赋能多灾种早期预警

Based on Four Pillars of EW4ALL, AI Empowered Multi-hazard Early Warning

Pillar 1

Disaster Risk Knowledge and Management

Use AI to build a high-quality Corpus

Led by  **UNDRR**
UN Office for Disaster Risk Reduction

Pillar 2

Detection, Observation, Monitoring, Analysis, and Forecasting

Use AI weather forecasting models to improve monitoring and forecasting capabilities

Led by  **WORLD METEOROLOGICAL ORGANIZATION**

Pillar 4

Preparedness and Response Capabilities

Use AI to improve fast communication capability

Led by  **IFRC**

Pillar 3

Warning Dissemination and Communication

Use AI to create a guide for urban disaster prevention and mitigation

Led by  **ITU**

第一支柱 – 打造AI赋能的灾害风险知识与管理语料库工具

Pillar 1 An AI-powered Urban Early Warning Information Corpus Tool

Pillar 1

Disaster Risk Knowledge and Management

Led by

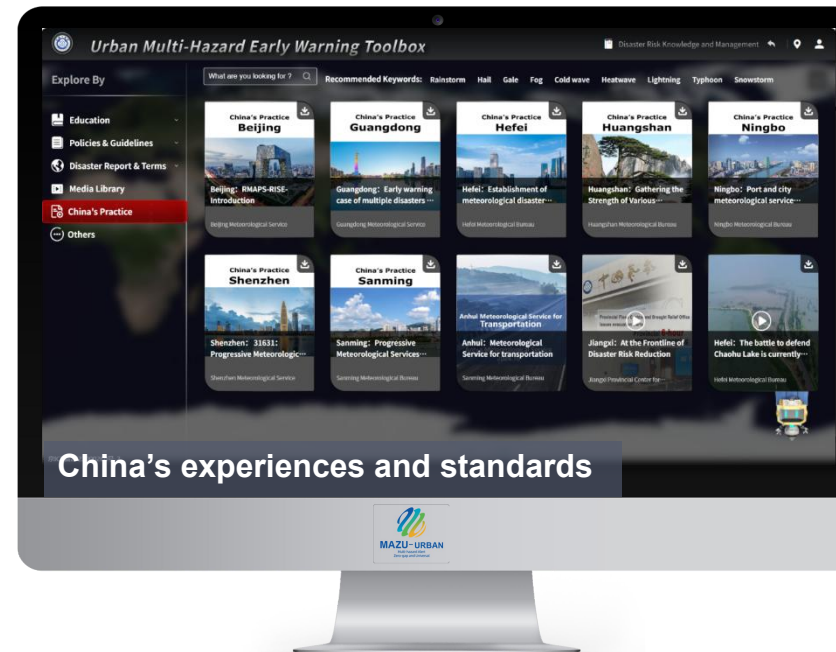

International standards: UN, WMO, UNEP...

China's experiences and standards: **11 cities** (Beijing, Shanghai, Guangzhou...)

Users' experience and standards: **2 Members** (NAMEM and SMG)

8,500 AI knowledge pairs have been formed and will be updated regularly.

For Pillar 1, standards and experiences were collected from international organizations, 11 cities in China, and users. Right now, 8,500 AI knowledge pairs have been formed and will be updated regularly.

第二支柱 – 打造AI赋能的监测和预报分析工具

Pillar 2 An AI-powered Monitoring and Forecasting Analysis Tool

Pillar 2
Detection, Observation, Monitoring, Analysis,
and Forecasting

Led by

WORLD
METEOROLOGICAL
ORGANIZATION

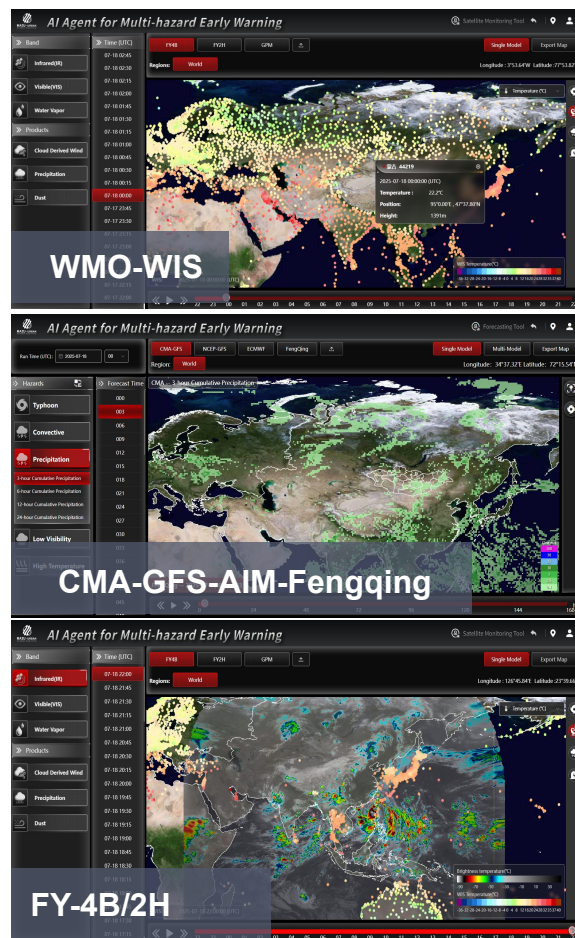

International exchange data

Over **6,000** station observations from
WMO-WIS

China satellites and AI weather forecasting models

FY- 4B/2H +1 global AI model +1 regional
AI model for Africa

Analysis tool to improve urban
disaster monitoring and forecasting will be
provided

For Pillar 2, based on more than 6000 WMO-WIS stations, China's Fengyun satellites, and China's AI weather forecasting models, analysis tool to improve urban disaster monitoring and forecasting will be provided.

第三支柱 – 打造AI赋能的预警发布和传播工具

Pillar 3 An AI-powered Disaster Information Collection and communication Tool

Pillar 3 Warning Dissemination and Communication

International exchange data: **CAP warnings** issued by WMO Members from WMO-SWIC

Users' disaster information: Disaster events that happened in user's city

Minute-Level Urban Disaster Collections:

Search multi-source information and generate urban disaster bulletins by **AI**

Multi-channel dissemination: **One-click** sharing to Weibo, Wechat, Telegram, X, Ins, and YouTube

For Pillar 3, based on WMO CAP warnings and disaster events that happened in user's city, we use AI to search multi-source information and generate urban disaster bulletins, with one-click sharing to social medias (such as X, Instagram, etc.).

2 最后一公里 For the Last Mile Problem

推出双端 提升预警到达率

Dual Platforms for Better Warning Delivery

Route Weather Risk Assessment Tool for Lake Victoria

Change of water level compared to the base line

+0.5m → **+2.2m**
1993 2024

Market share
in Africa over **40%**

To bridge the “last mile” in early warning dissemination, we introduced two platforms to enhance warning delivery. For urban industries, we developed a smart tablet, and for the public, we offer a smart phone.

城市多灾种早期预警智能体是“国际公共产品”

AI Agent for Urban Multi-Hazard Early Warning (MAZU-Urban): International public products

**Open Source
& Open Access**

**Co-creation
& Sharing**

**Empower,
Not Replace**

Actually, MAZU-Urban has 3 key features: 1.Open source and open access, 2.Co-creation and sharing, 3.Empower, not replace.

35 members tested and evaluated our work

The development of MAZU-URBAN has been guided by the WMO, with technical support from the CMA, financial and institutional support from the Shanghai Municipal Government. MAZU-URBAN has also received support from relevant international organizations, countries (and regions), as well as our partners. Up to now, 35 Members tested and evaluated our work. In future, we will continue to expand our service coverage and improve its effectiveness, following the principle of “one country, one policy” and “one city, one policy.”
